

## Super class constructor

```
package SuperClass;
public class Animal {
    Animal(){
        System.out.println("Animal constructor called");
    }
}

public class Cat extends Animal {
    Cat(){
        super();
        System.out.println("Cat called constructor");
    }
}

public class Main {
    public static void main(String[] args) {
        Cat c= new Cat();
    }
}
```

### Output - Super class constructor (run) ×

run:

Animal constructor called

Cat called constructor
