

Super class

```
package SuperClass;
public class Animal {
    void sound() {
        System.out.println("Animal makes a sound");
    }
}

public class Cat extends Animal {
    void sound() {
        super.sound();
        System.out.println("Cat makes sound meow");
    }
}

public class Main {
    public static void main(String[] args) {
        Cat c = new Cat();
        c.sound();
    }
}
```

Output:

```
run:
Animal makes a sound
Cat makes sound meow
BUILD SUCCESSFUL (total time: 0 seconds)
